TITLE OF THE INVENTION

DNA ENCODING A HUMAN SUBUNIT OF THE 5-HT₃ SEROTONIN
RECEPTOR

5

ABSTRACT OF THE INVENTION

DNA encoding human 5-HT₃-C has been cloned and characterized. The recombinant protein is capable of forming biologically active human 5-HT₃-C protein. The cDNA has been expressed in recombinant host cells that produce active recombinant protein. In addition, the recombinant host cells are utilized to establish a method for identifying modulators of the receptor activity, and receptor modulators are identified.
